Weekly Rainfall and Temperature Outlook and Monitoring

Highlights

Outlook for 04 to 11 June 2025

- Wet conditions are expected over most parts of South Sudan from 04 June to 11 June 2025.
- **Forecast Mean Temperatures** are expected to be below 30°C across the Southern parts of South Sudan, while temperatures exceeding 30°C are anticipated in the northern part of the Country.

Last week's weather review: 19th to 25th May 2025

- Dry conditions of less than 25 mm were most of South Sudan last week, 25th to 31st May 2025

Thus, it is recommended that the general population adopt the following safety measures:

- Encourage efficient water use and pre-position resources in areas forecasted for hotter and drier conditions
- Inspect your home. Remove leaves and debris from gutters, and clear your storm drains and drainage areas of any debris before the rain in Southern South Sudan areas.
- It's good to stay updated on meteorological services advisories, especially in regions expecting hotter and drier conditions
- Monitor weekly forecast updates from meteorological services

Notes

The South Sudan Meteorological Department's Weekly Rainfall and Temperature Outlook and Monitoring offers concise and timely weather predictions essential for immediate planning and operational decisions across vital sectors such as agriculture, transportation, and emergency services. This forecast provides a detailed outlook on temperature variations, rainfall probabilities, and any impending severe weather conditions, enabling stakeholders to mitigate risks, plan agricultural activities more effectively, and ensure the safety of transportation routes. The weekly forecast is critical in improving community readiness and economic stability by accelerating short-term decision-making processes.

Weekly Rainfall and Temperature Outlook and Monitoring

Total Rainfall (mm) for 04-11 Jun 2025

Source: NOAA/CPC

Monitoring last week's Satellite & Gauge Estimated Rainfall (mm) for May 25 to 31, 2025

During the past, most parts of South Sudan have been dry, while parts of the Bibor Administration Area, East of Jonglei State, and the eastern parts of Upper Nile State have had rainfall of more than 25 mm.

Heat Stress Index for 04 June to 11 June 2025

According to the Heat Stress index below, we have three levels of heat wave (Caution, Extreme Caution and Danger)

The Legend is a light blue to blue colour representing Caution, it indicates a moderate level of risk, which means there are potential risks ahead that you should be aware of or a warning to proceed with care and stay alert.

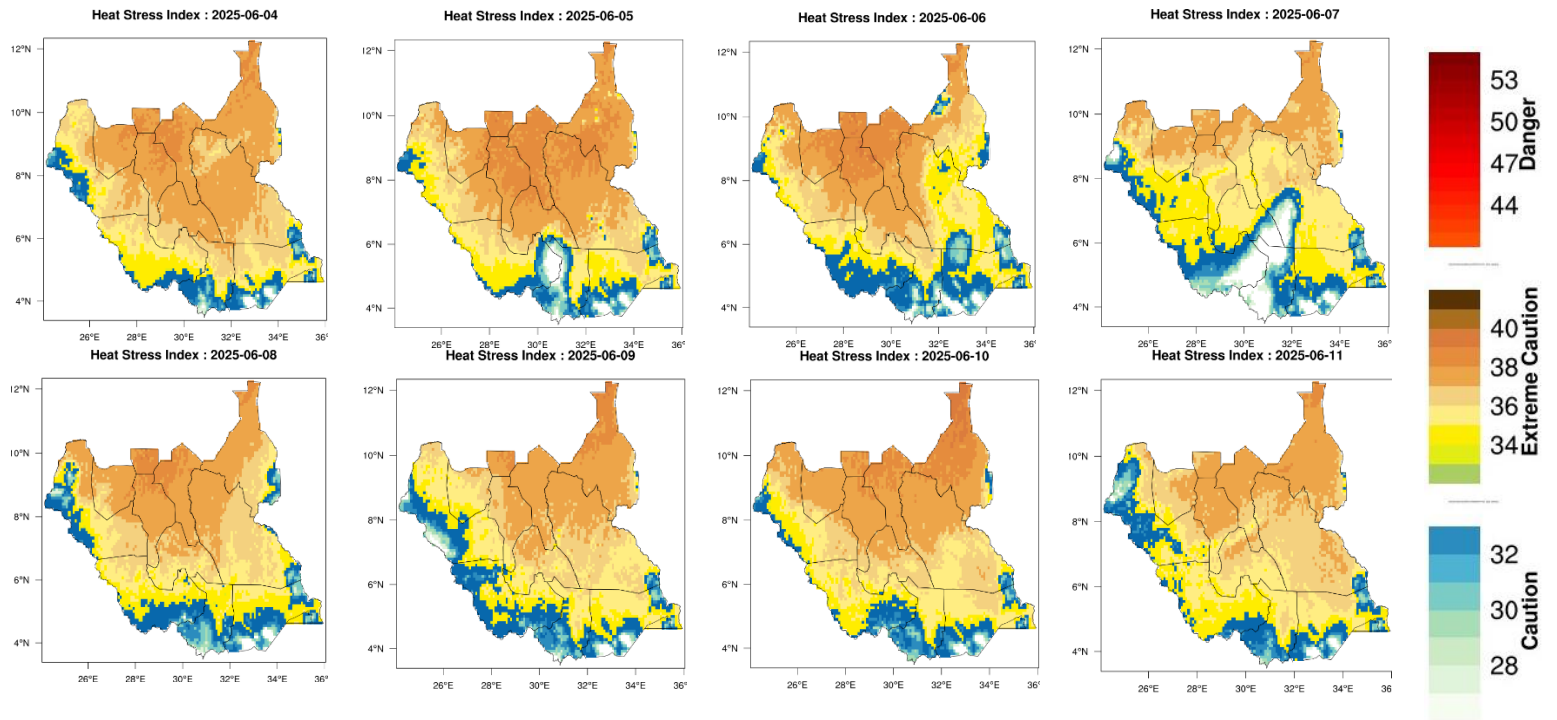

The second was Extreme Caution, which implies a higher level of risk than the first one (Caution). It suggests that the situation is more dangerous or precarious and requires heightened awareness and vigilance.

The last indicated by red colour was Danger, it is the most serious level of warning, indicating an imminent threat or hazard that poses a significant risk to safety or life. It signals that immediate action is necessary to avoid injury or harm.
